### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The claimed invention is drawn to the following:

1. (Original) A photoreactive resin composition comprising:
  - a powdered base metal;
  - an organic binder;
  - a photosensitive organic component; and
  - a polycarboxylic acid-based dispersing agent with a molecular weight of about 1,500 or less.

The inventive step is the use of the polycarboxylic acid-based dispersing agent with a molecular weight of about 1500 or less in a photoreactive resin composition. Applicants have pointed out the deficiencies of NEBE et al 5,032,490 wherein the dispersant has a molecular weight of 6000 to 8000, which is outside the claimed molecular weight of 1500 or less. This there is no suggested motivation to use dispersants have the claimed molecular weights.

Newly cited reference to KUBOTA (6,806,028) is not prior art wherein the inventive entity is the same, while KUBOTA et al (2003/0143486) fails to anticipate or render obvious the claimed composition by lacking a claim which recites a polycarboxylic dispersing agent, however the molecular weight range is not claimed or disclosed in the specification of KUBOTA et al. In addition no obviousness-type double patenting rejection is made because there is no claim for a dispersing agent let alone the specified molecular weights.

Because none of the references of record anticipate or render obvious the claimed invention, claims 1-8 are seen as allowable and passed to issue.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
